

PROJECT DOCUMENTATION

OneTownCity

A Hyperlocal Community Platform for Kuppam

Prepared for: Client Review

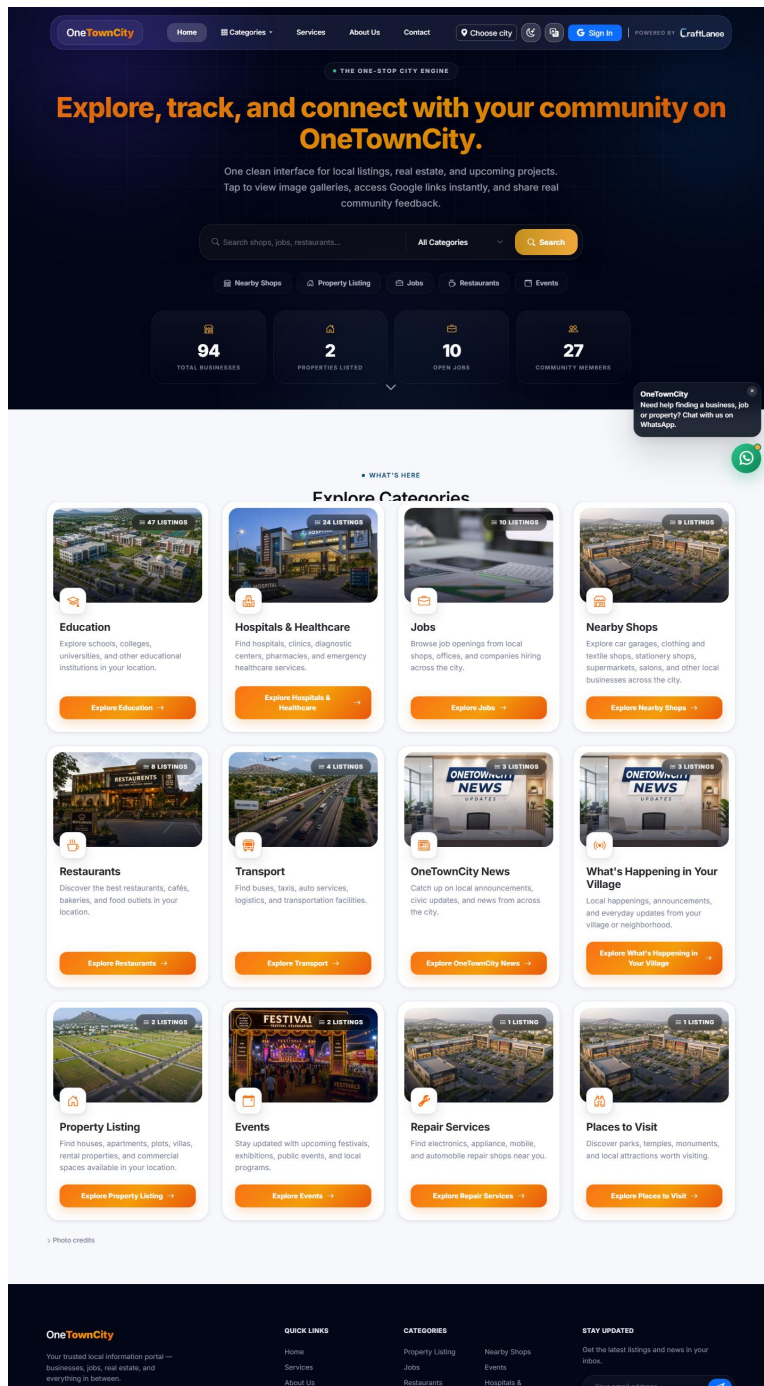

Prepared by: CraftLanee

Document date: September 10, 2026

1. Project Overview

OneTownCity is a hyperlocal community platform built for the town of Kuppam. It brings local businesses, real estate, jobs, events, news, and civic/infrastructure projects together in one place — giving residents a single trusted destination to discover what's happening locally, and giving local businesses and organizations a simple way to list themselves and reach the community.

The platform combines a public-facing directory and discovery experience with a self-service content submission system. Local businesses and residents can submit their own listings, while a structured admin and moderation team reviews and approves everything before it goes live — keeping the information on the platform accurate and trustworthy.

The OneTownCity home page — live listing counts, category browsing and search.

2. Who Uses the Platform

OneTownCity is built around five roles, each with a clear scope of responsibility:

Super Admin

Unrestricted, platform-wide access — oversees the entire system across all cities.

City Admin

Full authority over their assigned city. Can publish or approve content instantly, manage Sub Admins and Content Providers, and delegate specific permissions to their team.

Sub Admin

Given a scoped set of responsibilities by a City Admin — for example, managing only Business listings or only Events — through a fine-grained permission matrix.

Content Provider (Business/Resident Admin)

A business owner or resident approved to manage listings within specific categories they've applied for. Their submissions are reviewed before publishing.

Public Visitor

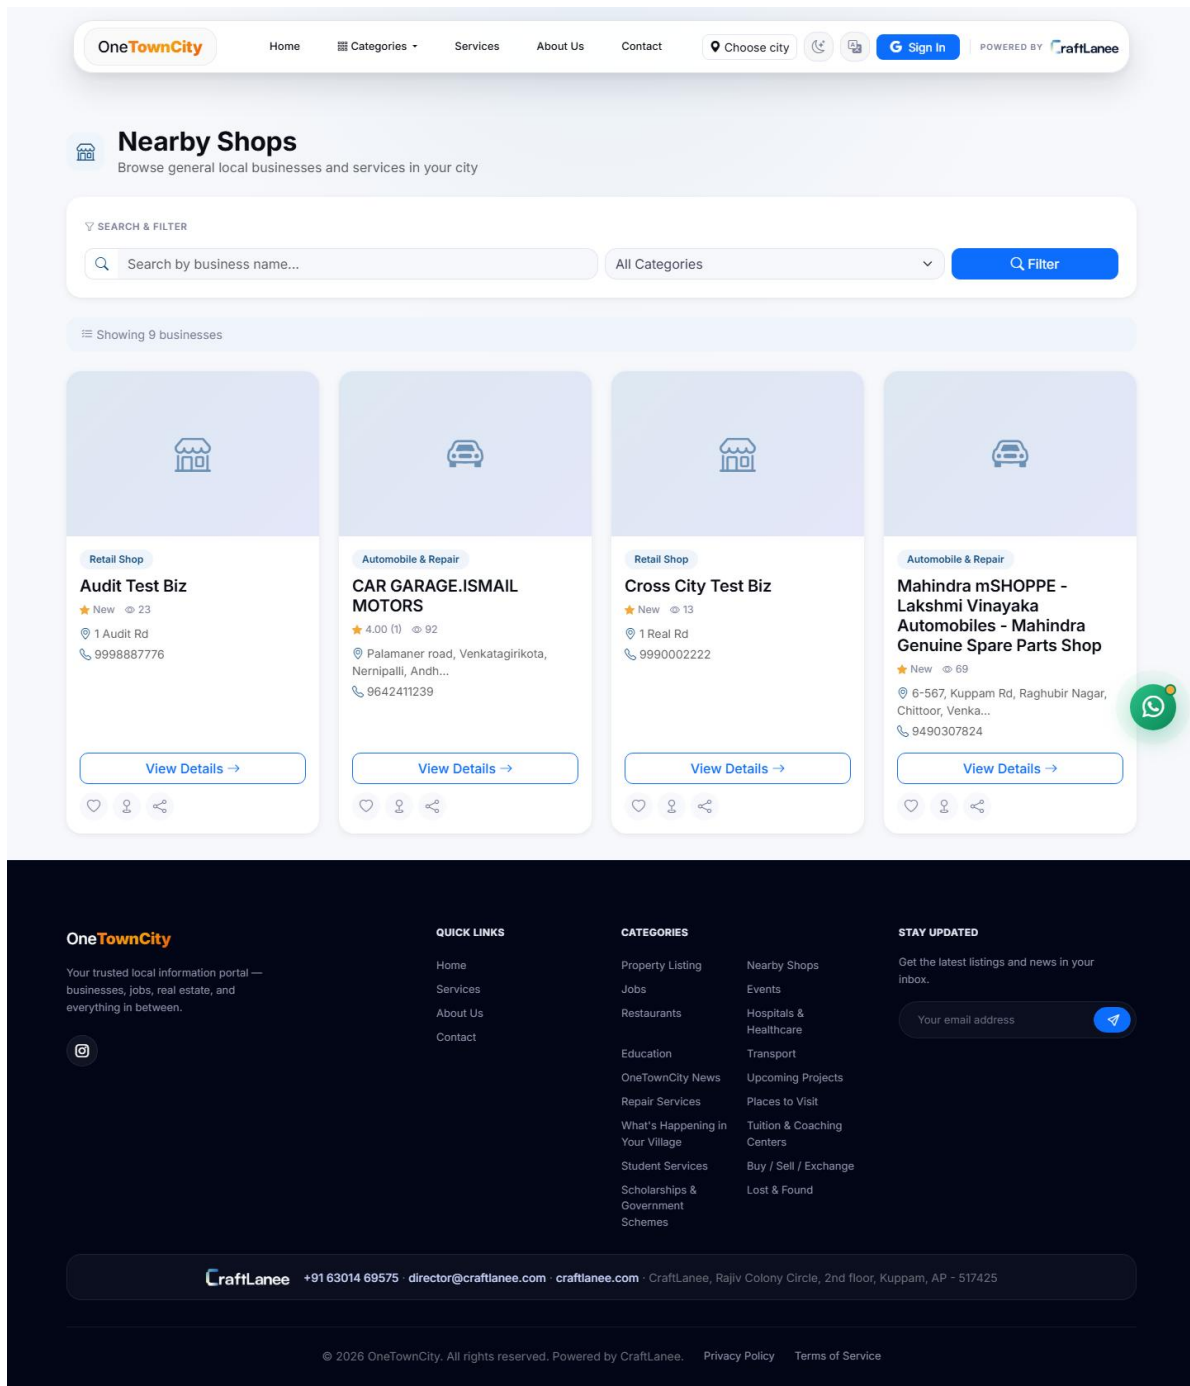

Browses and searches the directory; can like, comment, review, favorite, and share listings; and can apply to become a Content Provider.

3. What Can Be Listed

The platform supports six listing types, each tailored to the kind of information that matters most for it:

Listing Type	Captures
Business	Name, category (19 types — restaurants, pharmacies, hospitals, schools, tourism, and more), address, phone, GPS location for “near me” search, photos, description, website, Google Maps link, and structured working days/hours.
Property	Title, type (sale, rent, apartment, villa, plot, commercial, PG), price, location, contact details, GPS/Maps link, and photos.
Job	Company, job title, type (regular or hourly), location, salary, contact details, GPS location, and shift date/time for hourly gigs.
Event	Title, date and time, venue, description, contact details, and GPS/Maps link.
News	Title, article content, publish date, source, and photo.
Civic Project	Title, status (planned, ongoing, completed), location, expected completion date, and executing department — useful for tracking local infrastructure work.

Every listing supports multi-image photo galleries, a “featured” flag for highlighted placement, and active/inactive visibility control.

Business directory — filterable grid across 19 categories.

4. Content Review & Approval Workflow

To keep the platform accurate and trustworthy, every submission moves through a clear approval process:

Draft → Pending Approval → Approved / Rejected / Changes Requested

- **Instant publish** — City Admin submissions are published instantly, since they carry full authority.
- **Review queue** — Sub Admin and Content Provider submissions enter a review queue for the responsible admin.
- **Full control** — Reviewers can approve, reject with a reason, or request changes before resubmission.
- **Accountability** — Every listing keeps a record of who reviewed it and when.

Listing Approvals queue — Super Admin view.

5. Category & Access Management

Becoming a Content Provider

- Residents/businesses apply to list content in one or more categories.
- Applications are reviewed and approved or rejected, with an optional note.
- Approved requests grant access scoped to those specific categories.

Delegated Admin Control

- City Admins can delegate view/add/edit/delete/approve rights per listing type to Sub Admins.
- City-level scoping is built in, ready to support additional towns in the future.
- A category can grant access to its subcategories automatically.

6. Key Platform Features

Discovery & Search

- Site-wide search with category/type filters
- “Near me” GPS-based search
- Precise location pinning with Google Maps integration
- Structured, auto-formatted business working hours

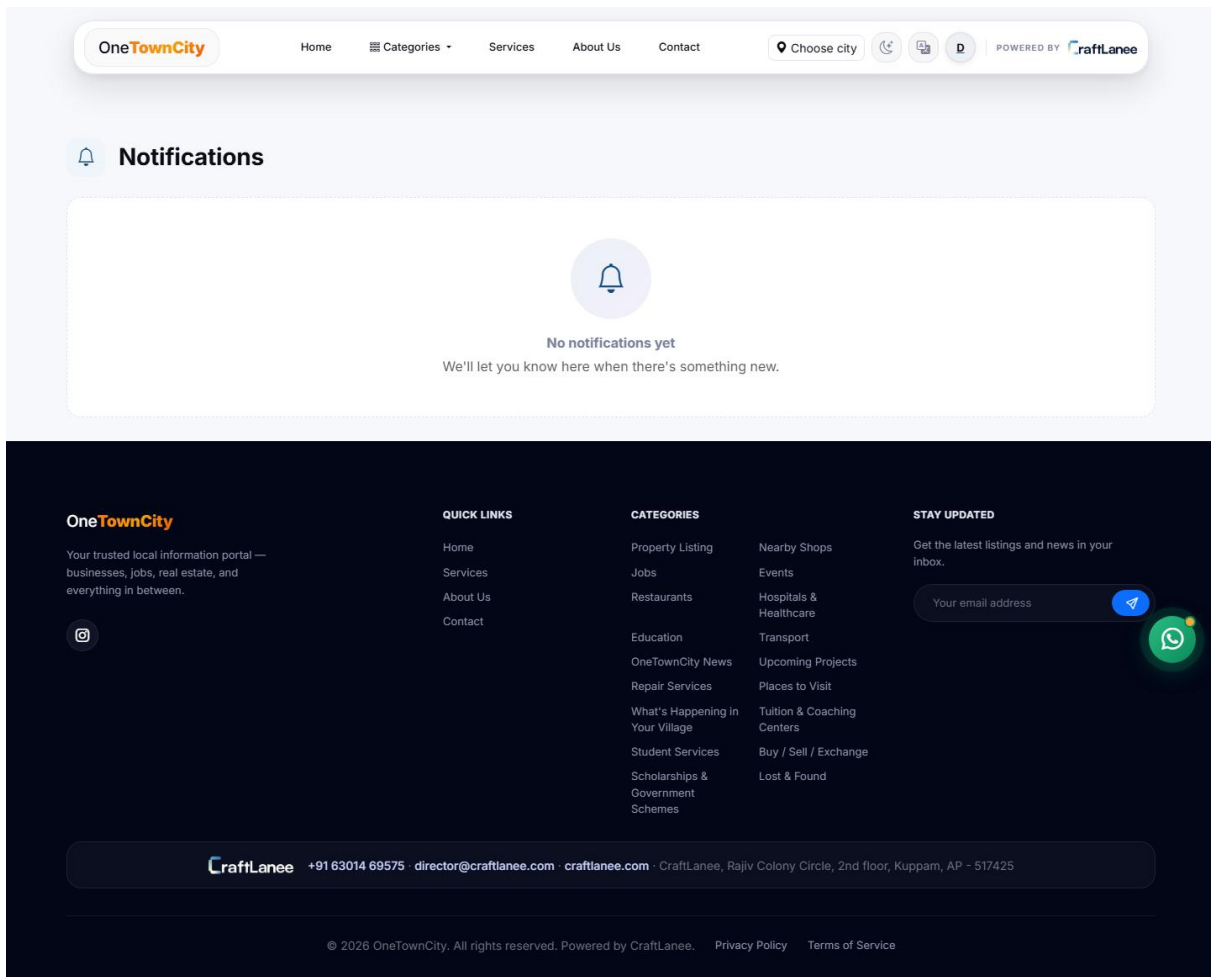

Community Engagement

- Likes, comments, and ratings/reviews
- Favorites and social sharing
- Content reporting for inappropriate listings
- Newsletter subscription and contact form

Notifications

NEW

- In-app notification bell
- Browser/OS-level web push notifications
- Admin dashboard alerts for pending requests

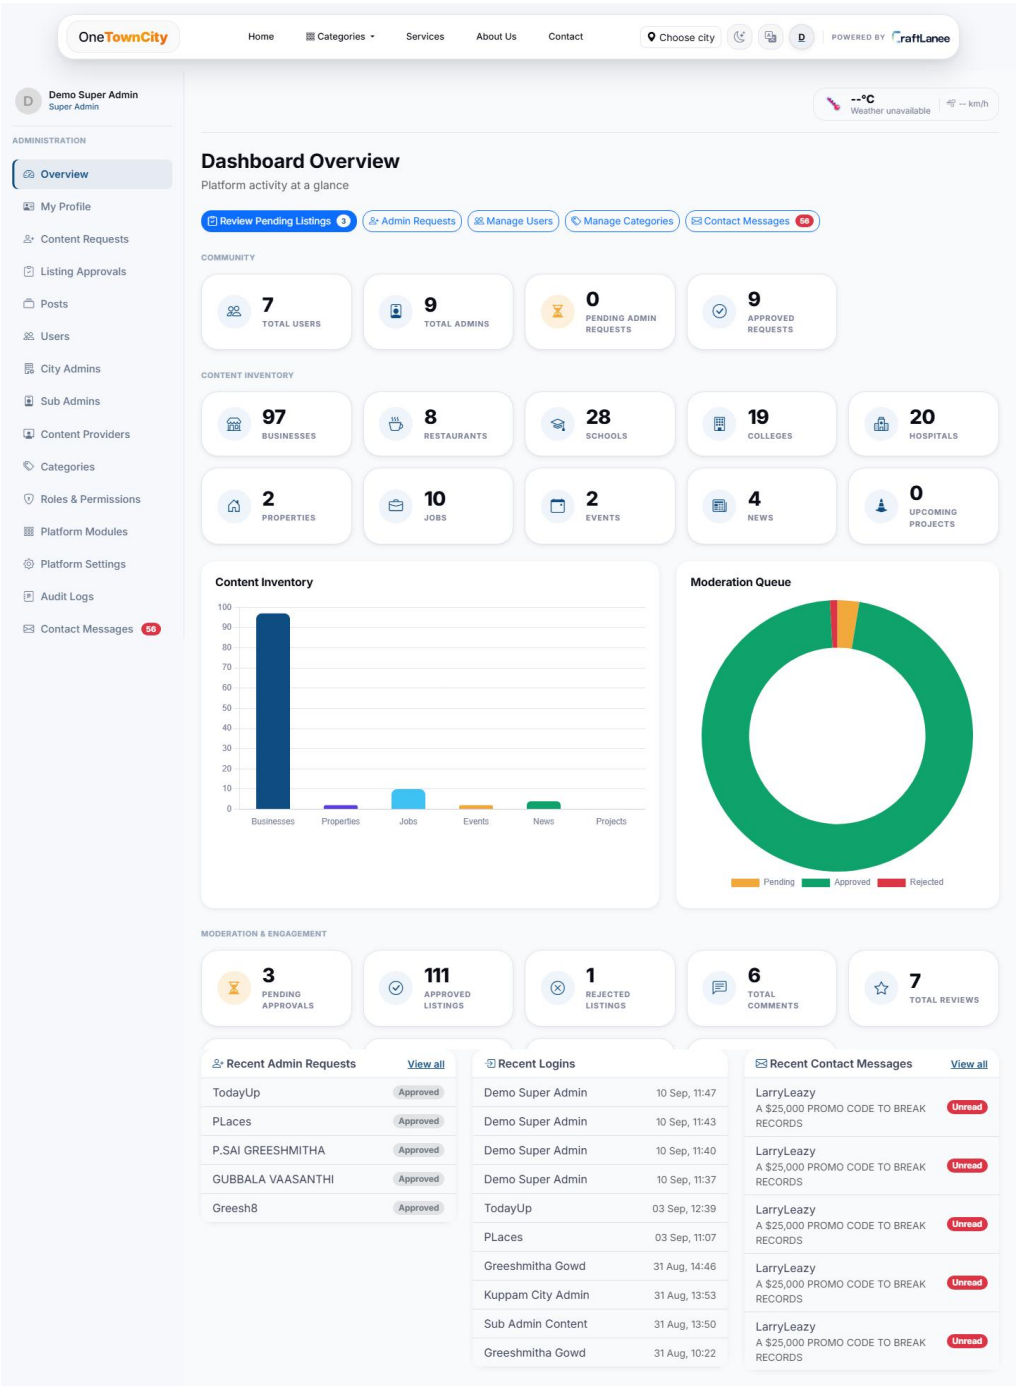

In-app notifications.

Accessibility & Reach

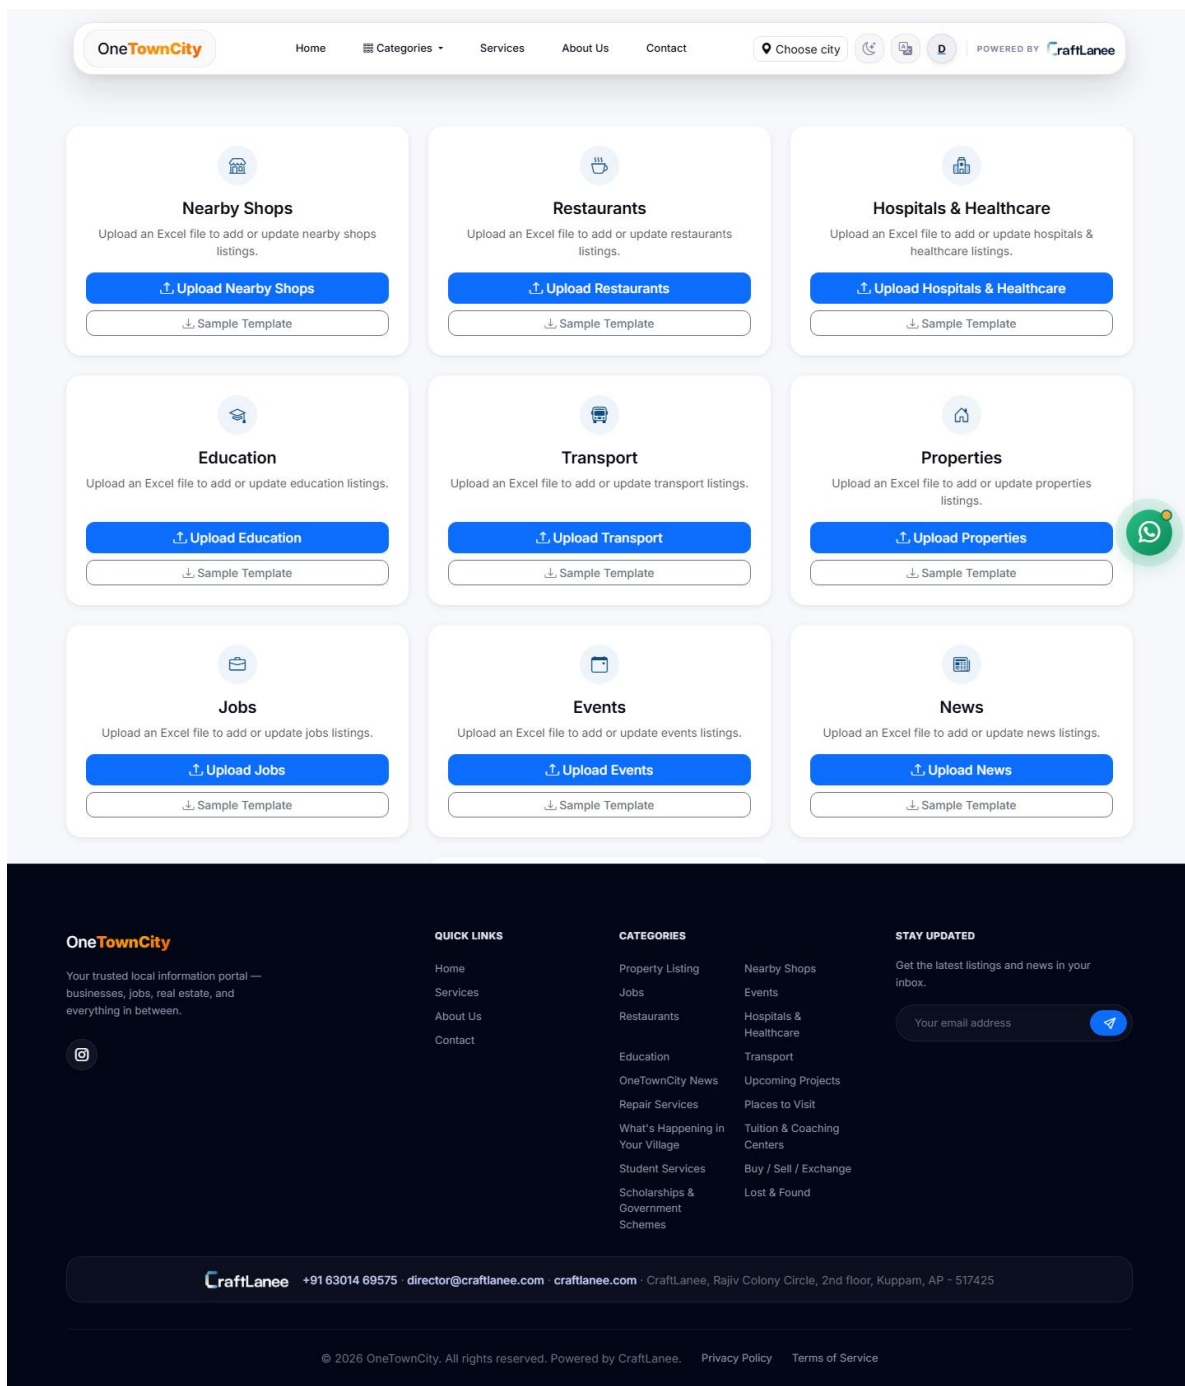

- Multi-language interface (Hindi, Tamil, Telugu, Kannada)
- Google Sign-In for quick, secure access
- Mobile-friendly, responsive design

Admin Tools

- Excel bulk import/export for fast content seeding
- Super Admin analytics dashboard
- Login history tracking for security

Super Admin dashboard overview — live metrics, content inventory and moderation queue.

Excel Upload Center — bulk-seed any listing type from a spreadsheet.

Trust & Safety

- Per-user suspension/blocking controls
- Full approval trail on every listing
- Role-based access at every level

7. Technology Overview

OneTownCity is built on a modern, reliable, and widely-supported technology stack:

- Django 5.1 (Python)
- PostgreSQL Database (Supabase)
- Supabase Cloud Storage
- Bootstrap 5.3 Frontend
- Google Sign-In Authentication
- Web Push Notifications
- Excel Import/Export (pandas)
- Gunicorn Production Server

The application is deployment-ready for standard cloud hosting platforms (such as Render or Railway), with configuration kept separate from the codebase so it can be securely deployed to any environment.
